POUR 'n GO

Is a natural humic based bio-technology containing billions of microbes designed for the treatment of Grey Water and Black Water retention systems.

The bio-technology provides a natural break down, degradation and removal of waste matter, while controlling odour generation and benefiting soil absorption processes.

FOR USE IN ALL GREY WATER SYSTEMS

BENEFITS

Provides control and suppression of odours generated by biological anaerobic processes.

Binds and biologically controls hydrogen sulfide generation & improves maintenance.

Breaks down and degrades organic waste matter that contributes to odour.

Naturally assists in the elimination of surface, side wall and bottom solids.

APPLICATION

For first application add 180ml for every 100 liters of system capacity. For ongoing maintenance add 150ml each week.

Product may be applied directly to the sump or to any sink draining to the retention sump. Application may be at any time of day or night.
